## Fleet Maintenance Management: EMDECS software + TMS

Bringing together all the moving parts of your enterprise

# BrightOrder

A multi-dimensional solution, made simple.

BrightOrder is a pioneer and industry leader of Fleet Maintenance Software (EMDECS) and Transportation Management Software Solutions. The company was founded in 1996 and has since grown to serve over 1,700 companies with 1.5 million assets globally. We provide the total global logistics package to help improve the functionality of your operation.

Our integrated offering includes:

- Fleet Maintenance Software for the smallest to largest of fleets
- Seamless integration with a Transportation Management System (TMS)
- Hosting and Cloud services, which brings everything together with one vendor

**BrightOrder... we bring together all the moving parts of your enterprise.**

## **EMDECS** Our Fleet Maintenance Software

EMDECS is cloud-based maintenance software for heavy-duty equipment combining fleet and repair shop management into one comprehensive package. Streamline both in-house and sublet maintenance activities and keep your fleet compliant with federal and state mandated regulations. We've built in everything you need to track assets, instantly see profit and loss, manage preventive maintenance, and reduce downtime for your fleet.

## Improving operational profitability

If you don't have a laser focus on your fleet maintenance expenses, your gross profits can get eaten up quickly. EMDECS helps run your fleet maintenance more efficiently, reduce the incidents of re-work and manage your warranty parts.

How can we do this?

- **ENABLE** your operation to take control of and manage the life cycle of each asset in terms of maintenance and repair.
- **REDUCE** rework and improve the overall parts management process.
- **COMBINE** fleet and repair shop management into one comprehensive package. This gives you true visibility into the asset and the status of service work performed on the asset. The EMDECS software contains everything needed to instantly manage preventive maintenance and repairs, which is critical to reducing downtime for fleets.
- **RECOVER** maintenance costs by tracking cores and warranty, ensuring PM compliance, providing trend data on which makes and models of equipment perform best and which need the most maintenance and repair. These capabilities and access to key data provide you with the tools needed to make the best decisions on asset spec'ing.

**"After implementing EMDECS, our shop has saved roughly \$4,800 a month on over-stocking parts, tracking warranty & cores. My profit increased 15% over the last year thanks to EMDECS."**

**- Kevin, (Director of Maintenance) FL**

## Increasing operational control

Losing control over your business operations can create issues with productivity. EMDECS helps monitor the status and progression of your fleet maintenance through several customizable features embedded into the software. You'll never feel out of the loop!

How can we do this?

- **MONITOR** progress of the job from estimate to invoice so everyone involved in the repair understands the status and has visibility into the repair and when the asset will be ready to go back on the road.
- **MANAGE** parts inventory and track parts warranties. This capability provides your organization the power to manage everything in one application.
- **TRACK** technicians and roadside repairs in real time providing visibility and notifications regarding the status of the vehicle and the emergency roadside repair.

Whether you operate a national repair facility, or run an independent for-profit shop, EMDECS provides the right solution for you.

## Repair Shop Maintenance Solution

EMDECS keeps your shop profitable by making every operation transparent. Instantly see profits on each job, part and service in easy-to-generate reports. Repair orders are simple for your technicians to fill out in real time. See everything that's going on in your shop with EMDECS.

### In-Depth Reporting

- Analyze Profitability
- Determine Equipment Value
- Categorize Inventory

### VMRS Coding

- Industry standard coding convention for tracking equipment and maintenance information

### Repair Orders in Real Time

- Repair jobs can be tracked at every stage from estimate to invoice

### Instantly See Profits & Loss

- Reports & On-screen tools help evaluate shop performance throughout the repair cycle to reveal real profit margins

### PM Scheduling

- Keep preventive maintenance work organized
- Avoid work orders from slipping through the cracks

### Mobile Repair Order (RO)

- Track technicians and roadside repairs in real time

- Management and customers have unlimited access to status of emergency roadside repairs

### Inventory and Warranty Tracking

- Track core parts
- Notify management when parts warranties are due to expire
- Suggest what inventory should be replenished based on usage tracking
- Manage inventories and operations from multiple locations

## Fleet Maintenance Solution

Maintaining a fleet of vehicles is a huge cost center for any business. Reduce these costs with EMDECS by tracking cores and warranties, ensuring PM work is completed on time, and even tracking which makes and models cost the most money. Take the guesswork out of controlling your fleet maintenance costs with EMDECS.

- In-depth business analysis
- Comprehensive reporting
- VMRS coded operations
- Real-time repair order tracking

- Easy access to maintenance details
- Instant access to profit and loss
- Integrated MOTORS SRT times

## TMS Consulting Services: Guaranteed industry experience

### The Right Team for Your Team

Our supply chain consulting services allow you to effectively strategize, design, plan, execute, and monitor your global supply chain operations with ease. Whether you are merging with another entity, designing a new distribution network, or optimizing your fleet operations, rely on our decades of experience to attain all of your logistics needs.

#### **Bottom line benefits**

- Accurate data equals optimal decisions
- Increased asset utilization
- Real-time visibility and status of assets
- PM scheduling factored into planning/dispatching
- Data analysis and reporting across the organization
- Operational reporting of cost metrics

## **Where the power is: Incorporating all the moving parts of your enterprise**

While EMDECS is powerful on its own, the real power comes from the fact that it can be coupled with a Transportation Management System (TMS). By integrating EMDECS with a TMS, fleets know the true status of an asset. This enables fleet managers and dispatchers to make optimal decisions as well as real-time decisions when assigning a driver to an asset and the asset to a route.

EMDECS also tracks pending PM service, giving fleet managers and dispatchers better insight into the longer-term availability of an asset. They can see exactly when the asset is due for PM service and can plan and dispatch the asset so it will arrive for the scheduled service. This visibility makes it easier to match truck availability with drivers and their available Hours of Service (HOS).

The combination of EMDECS and TMS takes the chaos out of the transportation function and provides an organization with the tools and functionality to truly manage the operational process.

### **A Little About BrightOrder**

BrightOrder is a pioneer and industry leader of Fleet Maintenance Software and on premise/ Cloud consulting services. BrightOrder operations include clients and partners throughout North America, Europe, Australia, and Asia, and we maintain offices in Canada, the United States, Singapore, and Australia.

Possessing the widest range of Fleet Maintenance functional and technical capabilities, we have facilitated considerable improvements in efficiencies and effectiveness throughout the transportation industry. BrightOrder currently hosts more than 1.3 million vehicles on its cloud based platform sustained by a powerful maintenance backbone that drives service excellence enabling the streamlining and automation of repair operations for fleet maintenance and service centers. From the systems and technology that propel supply chains and global logistics, to the people that support the transport of goods, to the delivery of products to a consumer's doorstep, we bring together all the moving parts of your enterprise.
